Indicators

Accountability through Implementation
Outline

1. Development – Human Rights to Water & Sanitation
2. Implementation – Indicators as a Means to Accountability
3. Application – Creating Indicators for Water & Sanitation
Developing Water as a Human Right

To halve, by the year 2015, the proportion of the world’s people whose income is less than one dollar a day and the proportion of people who suffer from hunger and, by the same date, to halve the proportion of people who are unable to reach or to afford safe drinking water.
General Comment 15 (2002)

The adequacy of water, although variable, is determined in all circumstances by:

1. Availability
2. Quality
3. Accessibility
   - Physical accessibility
   - Economic accessibility
   - Non-discrimination
   - Information accessibility

[Right to water indicators should be identified in national water strategies or plans of action. The indicators should be designed to monitor, at the national and international levels, the State party’s obligations . . . [and] should address the different components of adequate water (such as sufficiency, safety and acceptability, affordability and physical accessibility)]

- UN Committee on Economic, Social and Cultural Rights
Implementing Water as a Human Right

UN Resolution on the Right to Water and Sanitation (2010)

“the right to safe and clean drinking water and sanitation as a human right that is essential for the full enjoyment of life and all human rights.”

From Independent Expert to Special Rapporteur

“Measuring whether Governments are making efforts towards the realization of the rights to water and sanitation to the maximum of available resources is an important budding area of work.”

- Catarina de Albequerque

Paul Hunt
Creating Indicators for Water and Sanitation

**Development**
- Elaborate Norms
- Conceptualize
- Outline Indicator Categories

**Implementation**
- Translate Existing Data into Rights-Based Indicators
- Create Overlap across Rights

**APPLICATION**
- Consult for scientific validity and policy relevance
Conflicts in Creating an Indicator Set for Water and Sanitation

**Qualitative vs. Quantitative**
- Statistics as Objectivity
- Cross-National Comparison
- Technical Specificity vs. Governmental Flexibility

**Data vs. Reality**
- Objectivity as Accuracy?
- Structuring Norms to Fit Data?
- Setting Policy to Meet Indicators?

What Role for Interdisciplinarity?
